How to Sync and Play iTunes Movies on Sony PlayStation 4

Posted by Andy Miller on August 18, 2014 11:05:35 AM.

According to Sony's announcement at Gamescom 2014, over 10 million PlayStation 4 units have been sold through to consumers worldwide. As one of the best video game consoles in the world, Sony PS4 once again shows significant advantages over its main competitors such as Microsoft's Xbox One and Nintendo's Wii U. Sometime earlier this year, Sony has revealed that it will launch a white version of PS4 bundled with a copy of Destiny on the game's September 9 release date. Based on consumers' response so far, it will probably lead to another peak season of the PlayStation 4.

Can We Transfer iTunes Movies to PS4 for Watching?

Apart from a top-leading video game console, the PlayStation 4 is also an ideal media device to play movies through home HD TV. It supports various commonly used video formats like MP4, AVI, etc. But after checking out the compatible formats with PS4, you will find that there is no M4V, another common video format used by iTunes movies and TV shows. In a matter of fact, there are so many people facing the problem of syncing iTunes M4V movies to play on Sony PS4, for example:

"I purchased some movies and TV episodes from iTunes. But it seems that I'm not allowed to stream them to my PlayStation 4 for playback. It just says wrong video format when I attempted to transfer the iTunes movies to PS4. Is there anything wrong with my operation? How can I sync and play iTunes videos on PS4 then?"

Before finding out a solution to play iTunes movies on Sony PlayStation 4, you need to firstly beware of the reason why iTunes movies are not supported by PS4. This is due to FairPlay DRM, an encryption technology created by Apple to encode videos sold from iTunes Store. Thus all movies and TV shows bought or rented from iTunes are encrypted with FairPlay and restricted to be played on Apple's software or devices only. Does that mean you are impossible to watch iTunes movies on Sony PlayStation 4 or any other non-Apple players? Absolutely not!
