

TunesKit for Mac Gets a Major Upgrade for More Stable DRM Removal

Posted by Dan Miners on July 23, 2014 11:15:09 AM.

July 23, 2014 - TunesKit Studio has recently upgraded its featured product - [Mac iTunes DRM Video Converter](#) to the latest v.2.0.1 to make this powerful iTunes DRM removal software work more stably when converting DRM-protected iTunes M4V movies to common MP4 on Mac OS X.

The upgraded version of TunesKit iTunes Video Converter for Mac comes with some major problems and tiny bugs fixed. Firstly, it solved the problem of not delivering picture in output files on certain models of MacBook as well as the problem of not displaying progress bar during conversion on Mac OS X 10.8. Besides, in order to optimize the software performance, it adopts an advance codec technique which results in a remarkable faster conversion speed than the previous version. With all these updates applied, TunesKit iTunes DRM Converter for Mac is expected to work much better in iTunes DRM removal and M4V video conversion.

TunesKit iTunes DRM M4V Converter is a smart yet professional DRM removal tool to bypass the DRM restriction from iTunes movies rentals and purchases thus to convert the locked M4V movies and TV shows to DRM-free MP4 format supported by most popular mobile devices and media players, like Samsung Galaxy Note, HTC One, Nokia Lumia, Google Nexus, VLC, WMP, etc.

Distinguished from any other iTunes DRM M4V converter in the market, TunesKit DRM Converter for Mac adopts a unique DRM decryption technique which makes it one of the fastest iTunes Video Converter to convert a batch of DRM-ed iTunes videos to unprotected MP4 at 20x faster speed with 100% original subtitles, 5.1 audio tracks and 1080P HD resolution preserved.

The current version 2.0.1 of TunesKit iTunes DRM Video Converter is fully compatible with the latest iTunes 11.3 and Mac OS X Yosemite 10.10, Mavericks 10.9, Mountain Lion 10.8.
